1. Extent Criteria

SCORAD is a clinical tool to standardize clinical evaluation of atopic dermatitis patients

The rule of 9 before the age of 2

Advisable to draw lesion spread directly on the evaluation sheet and then perform the calculation

2. Intensity Criteria

<table>
<thead>
<tr>
<th>Erythema</th>
<th>Oedema/papulation</th>
<th>Oozing/crusting</th>
<th>Excoriation</th>
<th>Lichenification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stage 1</td>
<td>Stage 1</td>
<td>Stage 1</td>
<td>Stage 1</td>
<td>Stage 1</td>
</tr>
<tr>
<td>Stage 2</td>
<td>Stage 2</td>
<td>Stage 2</td>
<td>Stage 2</td>
<td>Stage 2</td>
</tr>
<tr>
<td>Stage 3</td>
<td>Stage 3</td>
<td>Stage 3</td>
<td>Stage 3</td>
<td>Stage 3</td>
</tr>
</tbody>
</table>

3. Subjective symptoms

The two most representative items concerning the quality of life of patients (during the 3 previous days) are;
- Pruritus
- Sleep loss
The patient and/or parents expresses the intensity of pruritus and sleep loss using a visuel analog scale graded between 0 and 10

4. How is it calculated?

A = Spread .../100
B = Intensity .../18
C = Subjective symptoms .../20

SCORAD calculation $A/5 + 7B/2 + C$
