INDOOR BIOTECHNOLOGIES is a global immunodiagnostics and biotechnology company specialising in the development of innovative products and services for immunological and environmental sciences. The company is recognised as a world leader in the assessment of environmental exposure to allergens, offering the world's largest range of purified natural and recombinant allergens, together with allergen specific antibodies and immunoassays. Our services include allergen, cytokine and endotoxin analysis, as well as bespoke contract research services including custom assay development and product safety and efficacy assessments using our environmental testing suite.

We provide solutions to enable scientists to investigate allergic and other immunological diseases.
